I am a computer engineer specialising in NLP and machine learning for more than 15 years. My recent work is on multilingual NLP pipelines, speech processing, retrieval-augmented systems for on-premise LLMs, and information extraction. Alongside this, my research concerns low-resource and endangered languages, and what happens to them when general-purpose models are applied without adaptation. I work in Turkish, English, and French. Clients to date have been in telecommunications, SaaS, and enterprise software, where my work has ranged from research prototypes to systems in production.

Work Experience

Founder & NLP / ML Consultant

Dec 2020 – Present

Lucitext Software Solutions & Consulting, Istanbul, Turkey

I founded Lucitext and work through it as an independent NLP and ML developer and consultant. I build language and speech systems for client work, and advise on solutions to NLP and ML-related problems.

Consultant / Researcher & Developer (Part-time)

Sep 2016 – Feb 2020

Etiya Information Technologies, Istanbul, Turkey

I worked with a team on text processing and ML-based applications, researching and developing NLP methods for Turkish, English, French, and Arabic.

Research Intern

Jun 2015 – Dec 2015

UKP Lab, TU Darmstadt, Germany

I worked on fallacy detection in user-generated argumentative content, studying argumentation theory for understanding the problem and formalising features, evaluating annotations towards dataset formation, and developing models for the task.

Teaching Assistant

Sep 2008 – Jun 2015

Department of Computer Science, Istanbul Bilgi University, Turkey

I assisted in a number of courses, mostly logic, automata theory, linear algebra, NLP and introductory programming, and helped supervise undergraduate ML/NLP graduation projects.

Education

PhD studies, Computer Engineering

2018 – 2024

Boğaziçi University, Turkey

Coursework completed.

MSc, Computer Engineering

2008 – 2014

Boğaziçi University, Turkey

Thesis: *Detecting Subjectivity in the News Texts in Turkish Language* (Advisor: Prof. Albert Ali Salah)

BSc, Computer Engineering

2004 – 2008

Istanbul Technical University, Turkey

Thesis: *Analysis and Prediction in Academic Collaboration Networks* (Advisor: Prof. Zehra Çataltepe)

Projects

Multilingual NLP Suite

Lucitext, client project, 2026

A suite of NLP methods covering 30+ text analytics tasks — zero-shot classification, NER, emotion recognition, among others — on BERT-family transformer models. It runs as a standalone application, currently to be extended towards retrieval-based components for locally deployed language models.

Speech Emotion Recognition for Turkish

Lucitext, client project, 2026

Emotion recognition from speech, built on emotion2vec and carried from data collection through to deployment. Zero-shot models mislabelled some of the emotions; with fine-tuning, the model reached a decent level.

XGBoost-based Recommendation Engine

Lucitext, client project, 2025

A medium-scale, multi-tenant recommendation system for prioritisation and ranking in a SaaS product, delivered as a service with data fetching, feature engineering, model training and selection, and monitoring units.

Information Extraction for a Task Management Platform

Lucitext, client project, 2021–2024

Information extraction and text classification modules for an online task management and email exchange platform, built and maintained over time.

Multilingual NLP Library

Etiya, 2016–2020

A library covering the ML lifecycle from feature selection to production models, with applications from general-purpose text classification to query intent detection and dialogue systems, processing texts in Turkish, English, French, and Arabic. Where existing solutions did not cover Turkish, the components were written from scratch, including custom preprocessing tools.

Classical NLP Pipeline

2016–2019

A modular text classification pipeline built on scikit-learn, with applied research reports, which I developed throughout my MSc and PhD studies. [code](#)

Fallacy Detection in Argumentative Content

UKP Lab, TU Darmstadt, 2015

Reports of my studies on fallacy detection during my research internship at UKP Lab. [report](#)

Subjectivity Detection in Turkish News

2014

My MSc thesis work, detection of subjective tone in Turkish news texts. [code](#)

Research Interests

Language models, human languages, methods for under-resourced languages, speech, information extraction, information retrieval. Theory of computation, complexity theory, quantum computation.

Technical Skills

NLP & language models: transformers (BERT, RoBERTa), neural architectures, LLM integration (GPT, Llama, LangChain)

Speech: emotion2vec, speaker diarisation, torchaudio

Programming & tools: Python, Java, C, PyTorch, Hugging Face, scikit-learn, pandas, FastAPI, AI-assisted development (Claude / Claude Code, ChatGPT)

Languages

Turkish (native), **English** (fluent, TOEFL 98/120), **French** (B2, Institut Français de Turquie), **Kurdish** (Kurmançî dialect, intermediate)

Activities

Writings and talks:

- “The Generations of Speakers and Models: Measuring the Human–Model Semantic Gap in Endangered Languages”, abstract accepted, paper to be presented at the 30th Conference of the Foundation for Endangered Languages, in Paris, November 2026.
- “Boğaziçi Üniversitesi Direnişi Üzerine Bir Röportaj” (Interview on the Boğaziçi University Resistance), *co-interviewer*, BM Dergi, 2025.
- “Yapay Zeka Kimin Zekası?” (Whose Intelligence is Artificial?), *talk and essay*, BM Dergi, 2024.

Editorial board member, **BM Dergi** (Chamber of Computer Engineers Journal), 2024 – 2026.

Acted in a docufiction in 2000 and a drama film in 2016.
